

Juniperus chinensis itoigawa ref : 14080191

Juniperus chinensis itoigawa

ref. 10212 

[\[+\] Show on the website](#)

Description

Height of the tree: 380 mm. Width of the branches: 430 mm.

Artisanal quality non-enamelled pot: 280*220*83 mm. Moyogi style.

Diameter of the trunk: 70/80 mm. Nebari: 110/120 mm.

Juniper with graceful trays, a shari on its twisted trunk and jins.

Itoigawa variety with thin green canopy scales, particularly vigorous and perfectly adapted to the bonsai cultivation.

Contrary to the classic juniperus chinensis, it only loses little foliage in the beginning of summer.

This bonsai has a formed bark because it is more than 50/60 years old. Not any wire wound or cutting wound.

It comes from Master Tomoya Nishikawa's nursery.

Remarkable subject! Authentic bonsai with natural shari and jin, do not mistake with the tanuki bonsais.

Reformed in August 2019 with wire copper so that you can see the knotted trunk, unique feature of this bonsai.
