Description

Length of the spout without its rosette 280 mm. Weight empty 270 grams. Imported from Japan, this light-weight plastic watering can, with rosette, can hold 3 litres. It's highly rated for dispensing liquid fertiliser solutions. Dimensions of the tank : 190*140*140 mm. Diameter of the opening for the spout : 15 mm. Spout : 65*45 mm in plastic and metal for the part that makes the jet.
How to assemble it: First make sure that the small white ring is on the base of the spout (BELOW NOT ABOVE the screw-on part), you'll see a groove below the lip where it fits into. This seal will keep the spout watertight. Next you pass the blue ring over the top of the spout and screw it onto the can. (If the white ring is in the wrong place then the spout will leak water but when properly assembled the watering can works perfectly). Interchangeable copper nozzle can also be added to this model.
