

Juniperus chinensis itoigawa 05050209

Juniperus chinensis itoigawa

ref. 10417

[\[+\] Show on the website](#)

Description

Japanese Juniperus, itoigawa variety with very thin scales, the most adapted to bonsai.

Height: about 360 mm. Width: about 210 mm.

Dimensions of the pot: 160*125*50 mm. Han moyogi style.

This tree is more than 20 years old and comes from Japanese yamadori.

It has a beautiful bark. Diameter of the trunk: about 15/20 mm.

It is well ramified and still requires some work: the jins and the shari on that type of juniper with a sinuous trunk. There is a shari on the trunk and some jins on the branches.

It is currently ligatured but without strong cutting wound or wire mark.

It comes from Master Katoh's nursery, Omiya, Japan.

Shelf not included. Photographed in May 2020.
