

Camelia japonica ref 18110208

Camelia japonica

ref. 10552

[\[+\] Show on the website](#)

Description

Japanese Camelia that begins to flower. Height of the only tree : about 400 mm.
Width of the branches : about 380 mm.

Enamelled pot of : 200*140*70 mm.

Camelia flowers during more than a month if it is placed in a non-overheated bright room, in a veranda or outside but protected from great cold.

It is usually repoted in the beginning of Spring, in an acid akadama soil mixed with 25% kanuma soil.

A good fertilization and a generous watering will guarantee you an abundant flowering and years of happiness..

Shelf non-included. Photographed in December 2020.
