

## Fagus crenata seedling 40/60 cm

*Fagus crenata*

ref. 1095

[\[+\] Show on the website](#)

### Description

3/4-year-old seedling.

Delivered in a plastic 2 litre pot.

Height 40/60 cm.

Ø of crown 2/4 mm.

**Potted in autumn 2023.**

*Fagus crenata* is a variety of Japanese beech that has smaller leaves with notched sides, unlike its European cousin, *fagus sylvatica*. Its deciduous foliage turns a beautiful orange, red, yellow in autumn and the bark is a decorative grey-white. The pictures show how to turn this seedling into a forest style bonsai.
