

## Acer palmatum seigen 06050215

*Acer palmatum seigen*

ref. 11122

[\[+\] Show on the website](#)

### Description

---

Height of the tree : 360 mm. Width : 300 mm. Enameled pot : 250\*190\*75 mm.

Moyogi style.

This tree is more than 12 years old, with formed trays and a splendid bark.

Diameter of the trunk : about 12/18 mm.

Requires sun in spring and a half shade exposure during summer.

There is a cutting wound that is healing and will be healed in about a year.

Reputed in February 2021 in akadama soil.

The bark of the seigen variety trees naturally cracks along years, it gives it a particularly decorative aspect.

Also called seigai.

The spring foliage is bright pink with yellow/green veins, then it turns to dark green during summer and orange toned red during autumn.

Shelf not included.

Photographed in April 2021 with its spring foliage.
