

Fagus crenata 01020227

Fagus crenata hêtre crènelé du japon

ref. 11594

[\[+\] Show on the website](#)

Description

Height : 250 mm*140 mm.

Enameled pot : 125*100*50 mm.

Moyogi style coming from seedlings.

Splendid red/yellow orange toned during autumn.

This tree is more than 8 years old and is well ramified.

Deciduous foliage.

This Japanese beech tree variety has smaller leaves than the European variety, and a crenelated side (that is why the latin name of this variety is crenata).

Shelf not included. Photographed in February 2022.
