### Description

Height of the tree only : 300 mm. Width of the branches : 340 mm.  
Brick-colored non-enamelled fired pot from Yixing. Dimensions of the pot : 210 x 160 x 60 mm. Moyogi style, coming from Kyoshi Murakawa's nursery. Requires generous watering in summer and a regular fertilization all along the dormancy period. Well ramified subject with graceful trays and jins, without any strong cutting wound nor wire mark. Diameter of the trunk : about 35 mm and nebari of about 110 mm. For bonsai lovers. Itoigawa variety with thin green canopy scales, particularly vigorous and perfectly adapted to the bonsai cultivation. It loses only little foliage in the beginning of summer compared to the standard juniperus chinensis. Shelf not included. Photographed in June 2022. You might ligature it and work on the jins and their whitening in order to make that already promising bonsai much more beautiful.
