

## Acer buergerianum ref: 17030226

Acer buergerianum

[+] Show on the website

## **Description**

Height of the tree only: 250 mm.

Width of the branches: about 300 mm.

Japanese artisanal enameled firmed pot, from Tokoname.

Diameter of the pot: 240\*180\*50 mm. Moyogi style.

Formed and ramified trays without strong cutting or wire wounds.

Coming from aerial layering.

Big trunk, diameter: about 50/70 mm.

It will require 1 to 2 years more to finish the thin ramification of the trays. This is a promising bonsaï for bonsaï lovers.

Reformed in September 2020 under the direction of Master Tomoya Nishikawa in order to create more balanced trays and a crown with a better conicity than before.

Photographed in March 2022.

The buergerianum maple is easy to grow with its fast growth and beautiful fall colors.

Shelf not included.
