Description

Height of the only tree: 250 mm. Width of the branches: 300 mm. Dimensions of the sand color enameled pot from Yixing: 180*60 mm. Moyogi style. Requires generous watering in summer and regular fertilization all along the dormancy period. Well-ramified subject with graceful trays, a shari on the trunk, and jins. No strong cutting wounds or wire marks. For bonsai lovers. Itoigawa variety with very thin green canopy scales, particularly vigorous and perfectly adapted to bonsai cultivation. It only loses little foliage in the beginning of summer contrary to the standard Juniperus chinensis.

It comes from Kyoshi Murakawa's nursery. It is more than 40 years old. The shelf is not included. Photographed in October 2022.
