

Juniperus chinensis itoigawa ref : 08090239

Juniperus chinensis itoigawa

ref. 12040 

[\[+\] Show on the website](#)

Description

Tree height: 220 mm.
Branch width: 200 mm.

Glazed pottery in mottled red color: 155*155*60 mm.

Moyogi style. Juniper with graceful canopies and jins.

Itoigawa variety with thin green scales, particularly vigorous, and perfectly suited for bonsai cultivation, losing very little foliage in early summer compared to the juniperus chinensis type.

Formed bark as this subject is over 15 years old.

No significant wire scars or cutting wounds.

From the nursery of Master Fujiwara.

Genuine bonsai with original jin and shari, not to be confused with Tanuki. Since repotting was done in April 2023, it will need to be done again in April/May 2025. Admire the trunk coiled upon itself with its unique shari character of this bonsai. Whitening the deadwood with jin product, tinted with charcoal, will give it an ashy color, which is very attractive.
