Description

Samba stone imported from Japan. A unique, natural piece with its veining. This stone is used in the creation of Japanese gardens, chaniwa, tea gardens, or strolling gardens. This model, with its central hole designed to retain water, is one of the elements that make up the tsukubai and is called shozubachi. It is often topped with a bamboo spout that pours water, which then overflows in a simple closed-loop system. External dimensions: 430*400 mm. Height: 220 mm. The central hole measures approximately Ø 190*170 mm and is 110 mm deep. Approximate weight: 85kg ±. To showcase the beauty of the green veining, subtly marked with white, we wet the stone to photograph it in its most radiant appearance.
