Description

Nursery-grown tree delivered in a glazed cultivation pot: Ø 200 × 110 mm Tree height (without pot): approx. 350–450 mm Trunk diameter: approx. 10–15 mm This pine needs wiring to set the branch pads, and it can also be repotted into an unglazed bonsai pot, preferably. An untrained specimen similar to the one in the photo will be shipped. Rare variety of black pine “Kotobuki”, vigorous with fine foliage, very well suited to bonsai cultivation thanks to its short needles. High-quality low graft. See the photos for styling suggestions over the years.
