Description

Leaves: bright pink ribbed with brown in early spring, orange till midsummer and then shiny crimson or reddish orange in autumn. Best grown in partial shade. Splendid!

Attention, the plants, particularly those in 7.5-liter pots, are only 50 to 60 cm tall. This variety has slow growth.

Due to increasing demand in Europe for collectible varieties, I am offering younger, high-quality specimens this year. These young plants, ranging from 10 to 20 cm in height, are ideal for collectors wishing to acquire plants at an early stage of development.

Please note: the plants must remain in their original pot until spring 2026. A controlled fertilizer application has already been incorporated into the substrate and will provide sufficient nutrients throughout the 2026 growing season. Carefully monitor watering, protect the plant from strong winds, and position it in partial shade to ensure optimal growing conditions.

Technical description

<i>Species</i>	Acer amoenum
<i>Variety</i>	Amagi shigure baby
<i>Leaf colour</i>	Veined
<i>Leaf shape</i>	Palmated
<i>Adult height</i>	Less than 2 meters
<i>Shape</i>	Natural
<i>Exposure</i>	Partial shade
