Description

This yellow-orange colour Japanese volcanic earth is brilliant for cultivating azaleas and rhododendrons. For example, the Satsuki azalea needs it to grow quickly and healthily. Maples also love it because it makes the soil more acidic.

Here at Maillot-Bonsaï nursery we specialise in growing Japanese maple varieties and we add 10 to 15 percent Kanuma earth to their normal soil to ensure great results. This natural dry earth is found in meadows close to Kanuma city.

Kanuma medium grain earth. Grain size: Ø +- 2/6 mm. 1 sachet +- 14 litres. Weight (according to the rate of humidity) 5.55 kilograms.

Origin: SUPERIOR QUALITY earth from Japan.

How to use: Use on its own or add gravel or large-grain sand but not compost.
