Description

KETOH earth is a black, sticky natural clay imported from Japan. As the picture shows, it's used to create bonsai forests and plantations on rocks. Or join the latest gardening craze and use this Japanese clay to make hanging moss balls or kokedama.

Bag 1.2ltr. Weight according to rate of humidity of + - 800/ 1200 grams.

How to form a bonsai forest: Make a dough, roll it into a strip and lay it around the plantation. Now with your fingers, apply it like you would a plasticine, working up around the sides of the trees being careful not to disturb the roots.

How to make moss balls: Mix Ketoh earth and Akadama earth, then cover the root ball of a small plant with it. Finish with sphagnum peat moss. To hold it together, bind with a thin wire or transparent fishing line. See YouTube for tutorial videos on how to make [kokedama](#).
