Description

Tatsujin no shizuku small bottle 125 ml. This fortifying solution contains healing amino acids to nourish bonsai and encourage root growth. It was invented by bonsai masters Kato Saburo and Kentaro Shino to ensure the fast and balanced growth of their trees. Kentaro specialises in conifers in the Shizuoka region at the foot of Mt Fuji and has given workshops here at Maillot-Bonsai.

Use for these species: conifers, deciduous, flowering and fruit trees.

Dosage: 10 ml per 1 litre of water. Water once a month during the growing period from May to September for outdoor bonsai and throughout the year for indoor trees. For weak specimens double the dose to 20 ml per 1 litre. For perennial plants and mini bonsai use 5ml per 1 litre.

This product cannot replace a good fertiliser, it complements it by aiding root growth.
